

# Example Typst Document

## 1. Text and headings

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua quaerat voluptatem. Ut enim aequae doleamus animo, cum corpore dolemus, fieri.

### 1.1. H2

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua quaerat.

#### 1.1.1. H3

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore.

## 2. Links and other references

### 2.1. Links

Typst <https://typst.app>

### 2.2. References

Section 2

### 2.3. Footnotes

Some text<sup>1</sup>

## 3. Tables

Equation	Area	Parameters
$\pi h \frac{D^2 - d^2}{4}$	$h$ : height $D$ : outer radius $d$ : inner radius	$\frac{\sqrt{2}}{12}a^3$

## 4. Visuals

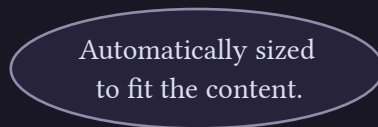

### 4.1. Circles

---

<sup>1</sup>footnote test

## 4.2. Ellipses

## 4.3. Lines

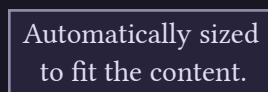

## 4.4. Paths

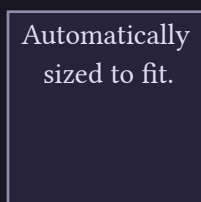

## 4.5. Polygons

## 4.6. Rectangles

## 4.7. Squares

## 4.8. Highlights

This is `important`.

This `Link` is important too.

So is this reference `Section 2`.

## 4.9. Code

Python syntax highlighting example, copied from bat (MIT License @ bat-developers).

```
from os import getcwd
import numpy as np
from matplotlib.pyplot import plot as plt
from time import *

# COMMENT test
h2 = 4 # this is a comment
"""this is also a comment"""

# Import test

# class test

class Hello:
    def __init__(self, x):
        self.name = x

    def selfprint(self):
        print("hello my name is ", self.name)

    def testprint(self):
        print(1*2, 2+3, 4 % 5, 8-4, 9/4, 23//4)

# Decorators test
class Decorators:
    @classmethod
    def decoratorsTest(self):
        pass

H1 = Hello("john")
H1.selfprint()
H1.testprint()

# list test
a = [1, 2, 3, 4, 5]
a.sort()
print(a[1:3])
print(a[:4])
print(a[2])
print(a[2:])

# dictionary test
# copied from w3schools example
```

```

myfamily = {
    "child1": {
        "name": "Emil",
        "year": 2004
    },
    "child2": {
        "name": "Tobias",
        "year": 2007
    },
    "child3": {
        "name": "Linus",
        "year": 2011
    }
}

# tuple test

testTuple = ("one", 2, "3")
print(testTuple)

print(np.random.randint(5, 45))

# string test
