From

```typ
1  #import "@preview/crudo:0.1.0"
2
```

and

```typ
1  #crudo.r2l(```c
2  int main() {
3    return 0;
4  }
5  ```)
```

we get

```typ
1  #import "@preview/crudo:0.1.0"
2
3  #crudo.r2l(```c
4  int main() {
5    return 0;
6  }
7  ```)
```

If you execute that, you get

```
(
  ("int main() {", "  return 0;", "}"),
  (block: true, lang: "c"),
)
```
